

### One-Hot Violation Rate by Scenario

### Violations Scale with Problem Size

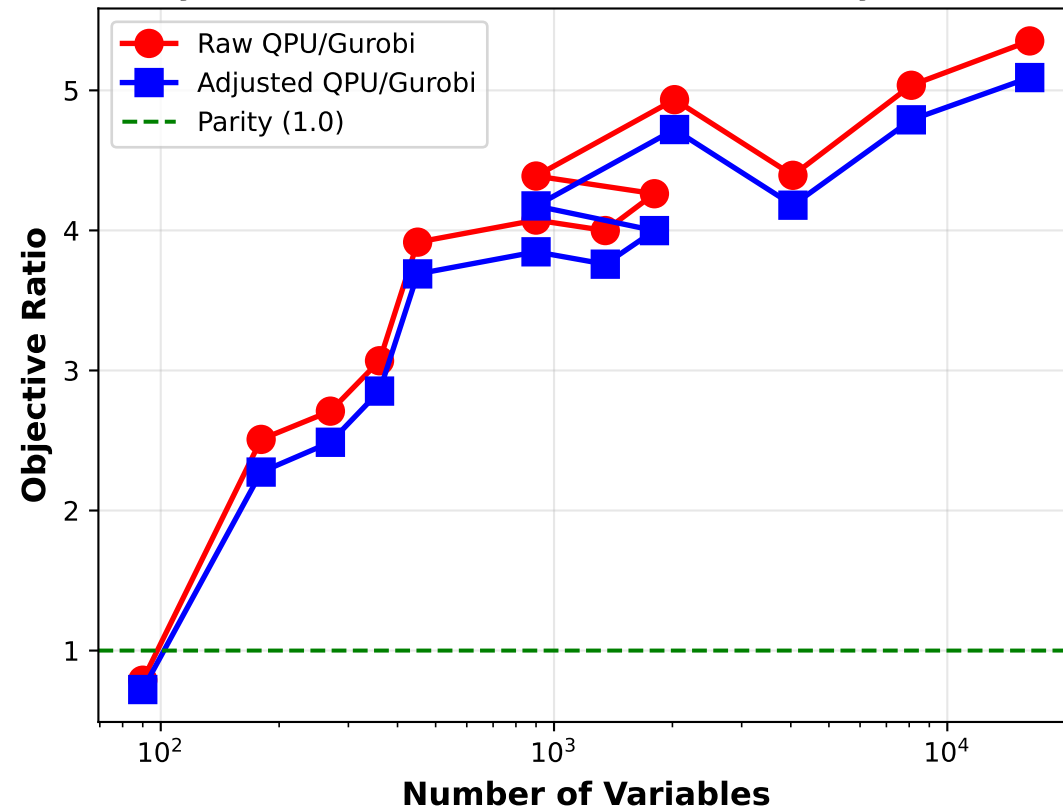

### Gap vs Estimated Violation Impact

### Objective: Raw vs Violation-Adjusted

### Objective Ratio: Before vs After Adjustment

#### VIOLATION IMPACT SUMMARY

Total scenarios: 13  
 Total farm-period slots: 2,175  
 Total one-hot violations: 526

Overall violation rate: 24.18%  
 Violation rate range: 6.7% - 26.3%

#### Gap Analysis:

Total raw gap: 1267.0  
 Gap per violation: 2.41  
 Correlation (viols vs gap): 0.9970

#### After Adjustment:

Avg raw ratio (QPU/Gurobi): 3.80x  
 Avg adjusted ratio: 3.58x  
 Gap explained by violations: 7.0%

#### INTERPRETATION:

Violations account for 7% of the objective gap. The remaining gap may be due to:

- Decomposition approximation errors
- Boundary effects between clusters
- Stochastic sampling variance
